

HYDROPOWER™ TECHNOLOGY

The power to continually renew.

Greater efficiency. Less maintenance. Realize both with HydroPower™ technology. This revolutionary innovation enhances the efficiency of Delta® faucets by enabling the faucets to recharge their battery. With as few as 24 uses each day, the flow of water continually recharges the lithium ion battery, allowing it to last up to 10 years. It also qualifies for points toward LEED® certification. Ideal for airports, shopping malls, healthcare facilities, office buildings and other demanding commercial applications.

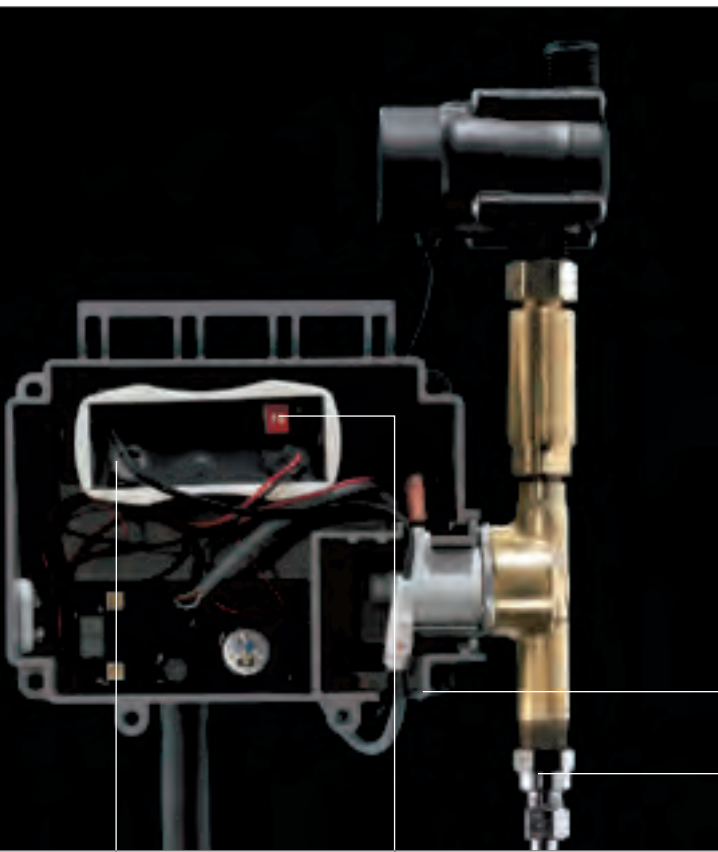

KEEP YOUR FAUCET BATTERY CHARGED.

HydroPower™ technology utilizes the faucet's water flow to continually charge the battery, which powers the faucet.

HydroPower technology is now available with the Delta® 590T, 591T, 1500T, and 3000T series faucets—as well as on Arzo® and Grail® faucets that feature Proximity™ Sensing Technology. It can also be easily retrofitted on all TECK® deck lavatory and 2.2 gpm HDF models by simply switching out the battery pack and installing the soft startup module.

Compared to battery or hardwire operation, HydroPower technology provides an environmentally friendly option that also contributes toward LEED® certification or a green project.

For more information, visit deltafaucet.com/hydropower.

Battery Pack

As few as 24 uses per day will keep the lithium ion battery charged—contributing to it lasting up to approximately 10 years.

On/Off Switch

The battery pack contains an on/off switch for battery conservation during seasonal usage. Product is shipped fully assembled in the OFF position to maintain battery shelf life.

Tempered Water Supply or Mixing Valve

Choose either a tempered water supply or a mixing valve—whichever is best suited for your particular application.

Surface Mount Control Box

Simplifies installation and maintenance; installed behind a sink apron, it reduces the opportunity for vandalism.
